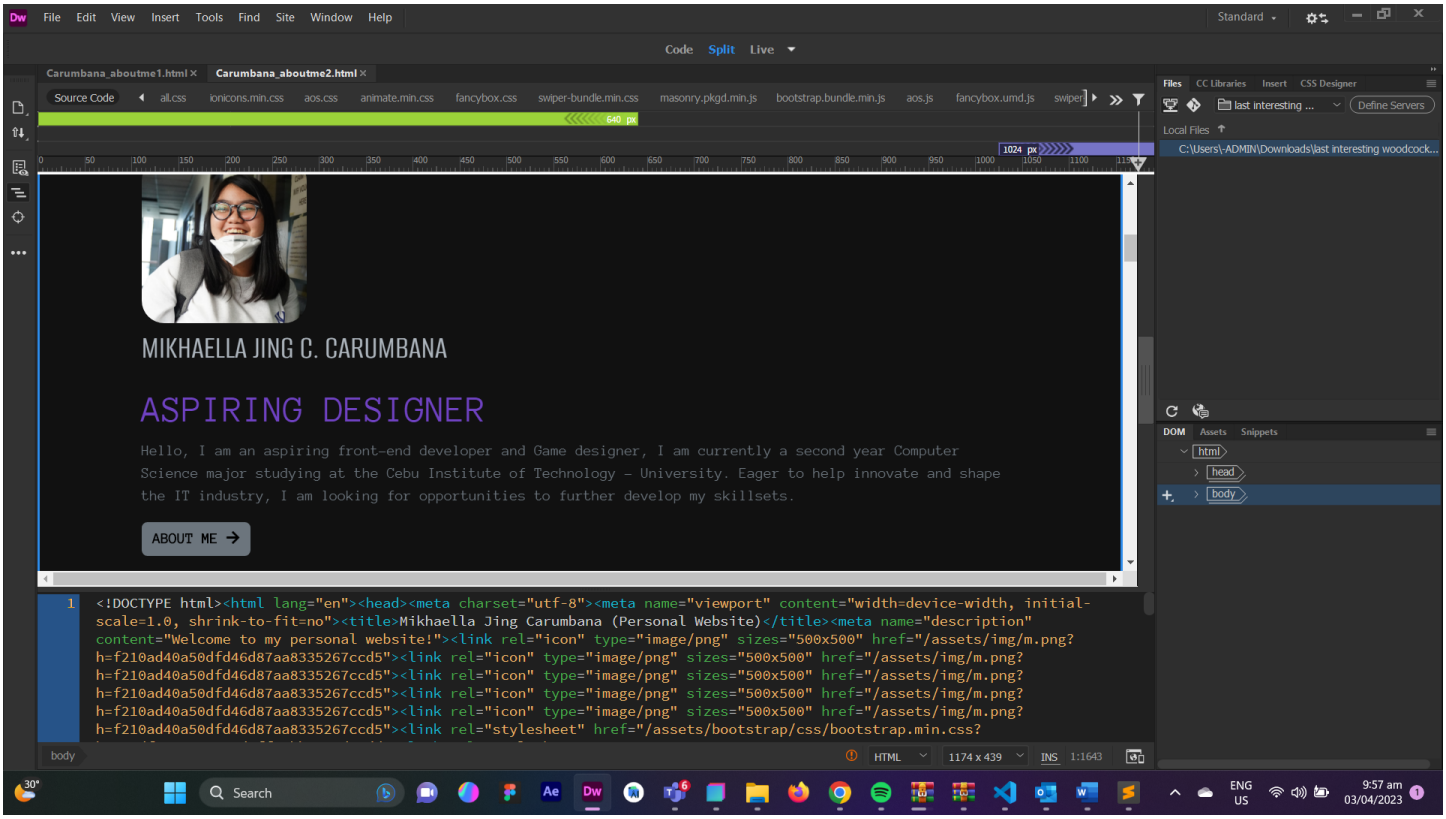
Hello miss,

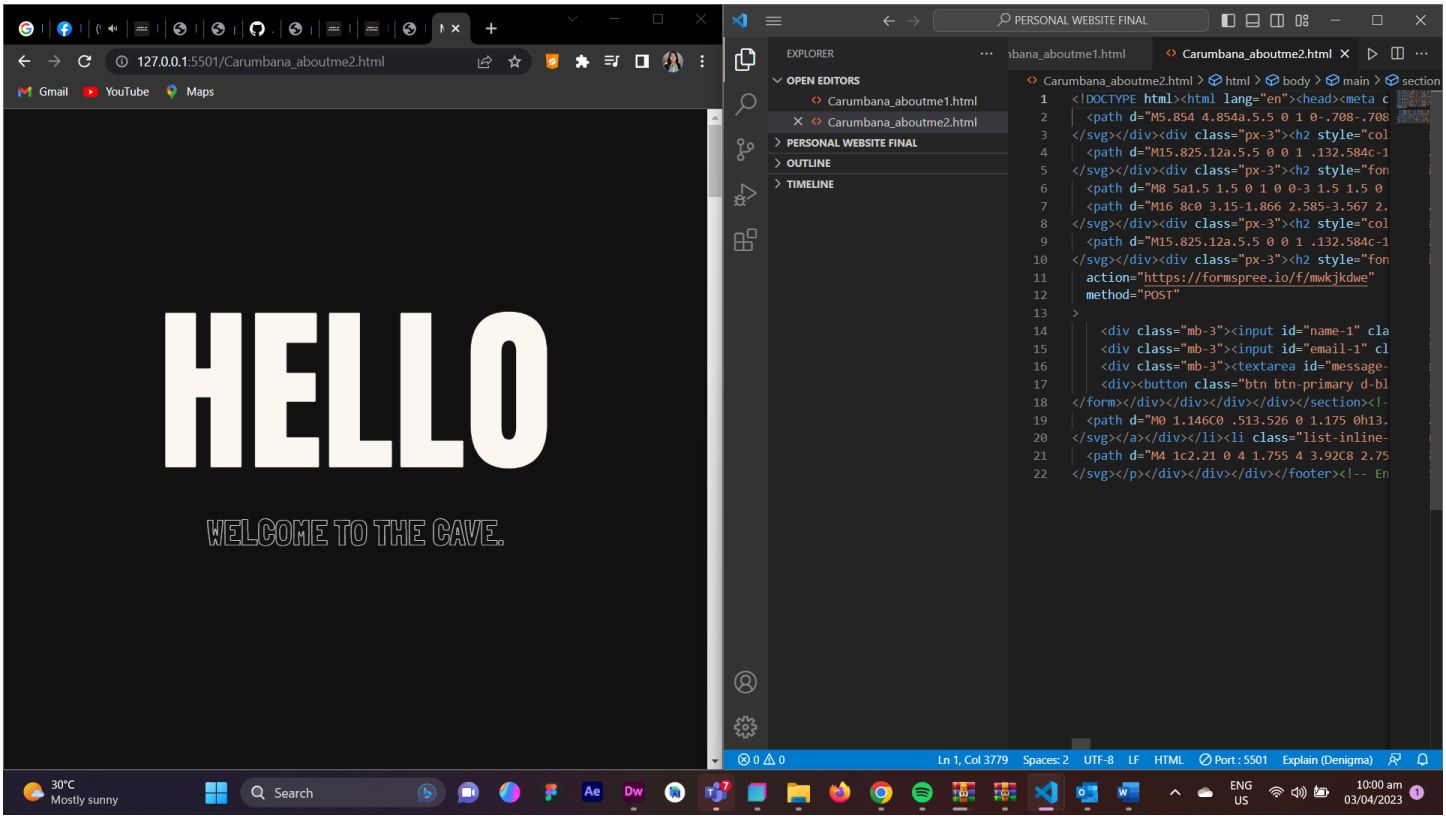
The website/html was made using both Adobe Dreamweaver, Bootstrap Studio, and VScode. It works fine on my end, I have opened it with Sublime text, VSCode, Dreamweaver, and have even repeatedly downloaded it in my GIthub repository and downloading the Zip file. It works fine, but it doesn't show in my friends' computers.

Here are some screenshots to prove that it works:

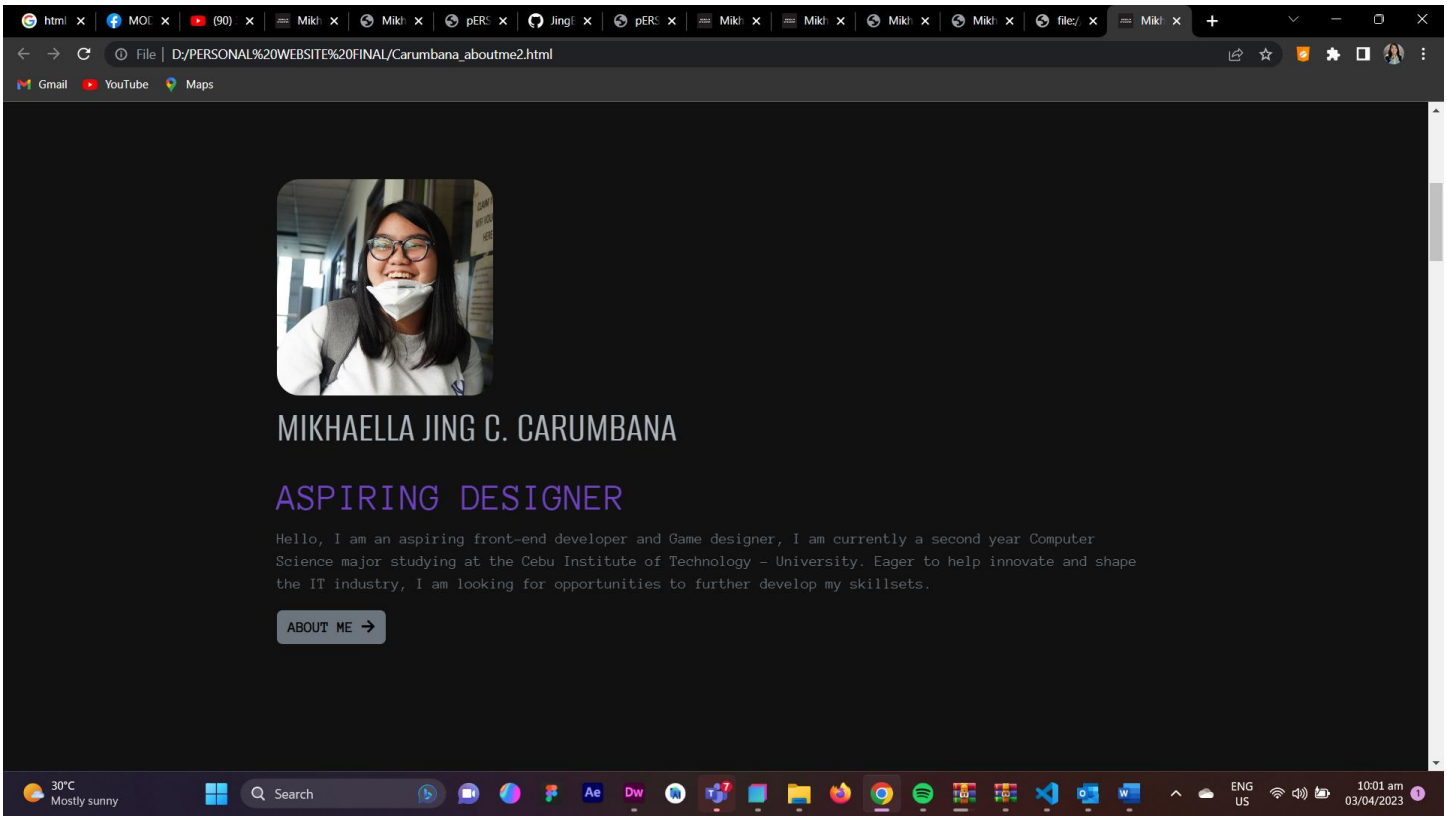
Dreamweaver



VSCode



Sublime Text



I will also attach the link to my personal website on the assignment tab as well as the source code for the website that I deployed in vercel.

Thankyou.
